

# Aurelium Packaging Solutions | Valuation evidence pack

Preliminary sell-side mandate | 31 December 2025 | EUR millions unless stated

This document provides source information for the valuation exercise; it does not determine the valuation conclusion. Management's classifications should be treated as inputs to the analysis, and missing information should not be inferred. Use this document together with the company profile, audited historical model and valuation workbook.

## VP instruction

The shareholders want a preliminary valuation range before deciding whether and how to proceed with a sale process. The range should inform shareholder expectations, process planning and the later evaluation of bids or offers; it should not be presented as a prediction of the eventual transaction price. Management has designated four listed companies as **Core Peers**. Assess those designations using explicit comparability criteria.

## Listed-company observations

### PC-08 | Solvia Healthcare Components

Solvia manufactures precision device components and subassemblies for regulated drug-delivery systems, serving pharmaceutical and medical-device customers. It has a European technical base and global customer programs, with direct design-in relationships, extensive validation and regulatory qualification, and long program lives. Its production asset base is moderate relative to its engineering content, and proprietary intellectual property contributes to its economics. Management treats Solvia as healthcare context rather than as a Core Peer. *Evidence limitation:* Solvia's product scope and intellectual-property economics differ from TargetCo's packaging business.

### PC-01 | Nordwell Closures plc — management-designated Core Peer

Nordwell manufactures technical closures for beverage, food and selected healthcare applications, including tamper-evident and dosing formats. Its customers are primarily food and beverage brand owners, together with selected healthcare customers. The company manufactures in France, Germany and Poland and generates predominantly European revenue. It sells mainly through direct multinational key accounts, supplemented by a smaller specialist-distributor channel. Customer tooling approval and closure-performance qualification are common, and the business combines recurring serial production with customer-specific tooling. Its injection-moulding asset base requires moderate maintenance and tooling investment. Management cites product overlap, European coverage and direct-account selling as the principal reasons for the Core Peer designation. *Evidence limitation:* Healthcare mix and channel-level margins are not supplied.

### PC-11 | Kernhaus Packaging Distribution

Kernhaus operates a broad packaging distribution, procurement and regional-logistics business serving small and mid-sized food, industrial and consumer-product customers. It has a pan-European distribution network of sales branches, account managers and warehouses. Proprietary product qualification is limited. Its economics are driven primarily by distribution, working capital and logistics rather than proprietary manufacturing. Although physical production assets are limited, inventory and receivables are material. Management does not include Kernhaus in the Core Peer set. *Evidence limitation:* Similar customer channels do not establish manufacturing comparability.

### PC-05 | Ceres Pharma Pack AG — management-designated Core Peer

Ceres manufactures high-barrier primary-pharmaceutical containers and regulated dosing formats for predominantly pharmaceutical customers. It operates European production facilities and serves global regulated-customer programs through direct, long-cycle technical accounts. Regulatory validation and customer qualification requirements are high, qualification cycles are long and switching costs are significant. Physical investment requirements are moderate, while process-validation and quality-system requirements are substantial. Management includes Ceres because TargetCo is increasing its Healthcare exposure. *Evidence limitation:* The supplied information does not establish that TargetCo has a comparable regulated-pharmaceutical revenue mix, growth profile or ROIC.

## Listed-company observations | continued

Read the business descriptions together with the quantitative information in the workbook.

---

### PC-13 | Tessera Precision Components plc

Tessera manufactures molded dosing, sealing and fluid-control components used in diagnostics, specialty chemicals and industrial applications. It serves customers through direct technical accounts with long design-in cycles. Customer-specific tooling, material compatibility and production-line qualification are common. The business combines recurring serial production with application engineering, and its moulding, tooling and automated-assembly requirements are similar to TargetCo's. Management excludes Tessera because it is not classified within the packaging sector. *Evidence limitation:* End markets differ from TargetCo's and no packaging revenue is supplied.

### PC-07 | Alpina Glass and Metal — management-designated Core Peer

Alpina manufactures premium glass jars, metal closures and decorated containers for premium food, beverage and beauty customers. It operates a European manufacturing network and sells directly to brand owners through design-led commercial programs. Product approvals are relevant, but production economics are dominated by glass furnaces and metal-forming assets. The business therefore has higher depreciation, energy use and replacement capital expenditures than an injection-moulded component manufacturer. Management cites rigid packaging formats, premium end markets and direct brand-owner relationships as the basis for the Core Peer designation. *Evidence limitation:* The supplied information does not resolve the differences in production technology and capital intensity relative to TargetCo.

### PC-03 | Veridia Rigid Solutions

Veridia manufactures specialty rigid food and household containers with tooling and short-run production capability. It serves food, household and regional premium-consumer customers through a combination of direct accounts and specialist distributors. Tooling, barrier performance and decoration require a moderate degree of customer qualification. The business combines recurring and shorter production runs, and its moulding capacity and tooling requirements are broadly comparable with TargetCo's. Management does not include Veridia in the Core Peer set. *Evidence limitation:* No end-market profitability split is supplied.

### PC-14 | Vela Contract Filling S.A.

Vela provides contract filling, secondary packaging and supply-chain coordination for food and personal-care brands in Western and Southern Europe. It operates under direct multi-year service contracts and is subject to customer quality audits, but it rarely owns primary-packaging tooling or designs components. The business is service-led, uses customer-supplied specifications and includes pass-through materials. Its capital expenditures and D&A intensity are lower than TargetCo's despite its exposure to the packaging sector. Management includes Vela in a broad sector screen but not in the Core Peer set. *Evidence limitation:* Revenue includes material pass-through and is not fully comparable with component-manufacturing revenue.

### PC-02 | Luminex Dispensing Group — management-designated Core Peer

Luminex manufactures pumps, droppers and dispensing components for premium-consumer and selected healthcare applications. It serves premium-consumer, personal-care and selected healthcare brand owners through a Western European manufacturing and commercial footprint. The business is oriented toward technical key accounts and customer-development programs, with qualification requirements for dispensing performance and material compatibility. It combines customer-specific programs with moderate moulding, assembly and tooling investment. Management cites dispensing exposure, qualification intensity and key-account economics as the basis for the Core Peer designation. *Evidence limitation:* The share of recurring platform revenue is not supplied.

---

### PC-09 | Flexora Films Group

Flexora manufactures flexible films, pouches and laminates for food, household and consumer-products customers. It operates globally with European production and sells to large direct accounts and regional converters. Food-contact and barrier specifications are relevant, but its production economics are based on film conversion and printing rather than component moulding and assembly. Management does not include Flexora in the Core Peer set. *Evidence limitation:* No format-level margin split is supplied.

### PC-04 | Helix Consumer Dispense S.A.

Helix manufactures closures and dispensing assemblies for premium-consumer and food applications. It serves European brand owners through direct and key-account relationships. Customer-specific dispensing performance and tooling require qualification, and the business combines serial component production with application support and moderate moulding and automated-assembly investment. Management does not include Helix in the Core Peer set. *Evidence limitation:* Healthcare exposure is limited relative to TargetCo.

### PC-12 | Orbis Recycled Materials

Orbis produces recycled-resin compounds for packaging and industrial converters through a European plant and sourcing network. It sells directly to converters, and material specifications are important, but customer qualification occurs upstream of finished-packaging production. Its economics are influenced by commodity spreads, processing assets and commodity-related working capital. Management does not include Orbis in the Core Peer set. *Evidence limitation:* Packaging exposure is indirect and the operating model differs from finished-component manufacturing.

### PC-06 | Mareello Food Containers

Mareello manufactures standard rigid food containers and lids for regional food processors and private-label customers in Southern and Western Europe. Sales are driven by high-volume tenders and distributor-supported regional channels. Food-contact approval is required, but customer-specific engineering and tooling content are limited. The business has more standardized products, shorter customer contracts and greater exposure to price competition than TargetCo. Management treats Mareello as sector context rather than as a Core Peer. *Evidence limitation:* Customer-retention data and mix-adjusted margins are not supplied.

### PC-10 | Baltic Molded Fiber

Baltic manufactures molded-fiber trays and food-service packaging for food-service, grocery and institutional customers in Northern and Central Europe. It sells through large tenders and regional distributors. Material and food-contact testing are relevant, but tooling lock-in is limited. Wet-forming and drying assets create energy and reinvestment economics that differ from TargetCo's component-manufacturing model. Management does not include Baltic in the Core Peer set. *Evidence limitation:* Sustainability positioning does not by itself establish operating comparability.

# Management's peer note

Management has not supplied formal weights, exclusion rules or a definition of Core Peer.

Management identifies Nordwell and Luminex as direct operating comparables. It also proposes Ceres because TargetCo is increasing its Healthcare exposure and Alpina because both companies sell premium rigid packaging directly to brand owners.

The workbook provides revenue, EBITDA, D&A, EBIT, NOPAT, invested capital, revenue growth, EBITDA margin, CapEx/Revenue and enterprise value for all 14 candidate companies. Recalculate each valuation multiple used in the analysis.

Management's Core Peer designation is an input to the analysis, not a substitute for explicit comparability criteria. Do not use a numerical comparability score unless the underlying criteria, measurement, weighting and treatment of missing information have been defined by the analyst.

## Supplied transaction observations

### PT-04 | Sorelle Capital / PharmaNest | 2025-04-11

PharmaNest is a high-barrier primary-pharmaceutical packaging specialist with predominantly regulated-pharmaceutical revenue. The transaction announcement described the company as one of few independent European suppliers qualified for two regulated delivery formats. No quantified synergy plan or bidder count is supplied. *Relevant transaction consideration:* PharmaNest's regulated-pharmaceutical focus and qualification profile differ materially from TargetCo's current business mix.

### PT-02 | Meridian Industries / LumiDose | 2023-09-29

LumiDose is a dispensing-components supplier serving food, premium-consumer and selected healthcare applications across Western Europe. The seller accelerated the sale process after an ERP implementation disrupted working capital and a covenant test. No insolvency filing occurred, and no quantified synergy amount is supplied. *Relevant transaction consideration:* The accelerated process and seller-specific working-capital and covenant circumstances should be considered when assessing comparability.

### PT-07 | Cobalt Buyout / EuroPack Distribution | 2023-03-21

EuroPack is a pan-European packaging distributor with limited proprietary manufacturing. The business was carved out of a diversified group, and the supplied materials do not quantify standalone-cost adjustments. *Relevant transaction consideration:* The distributor business model and incomplete standalone-cost information limit comparability with TargetCo.

### PT-01 | Arden Industrial / Capella Closures | 2024-06-18

Capella is a European technical-closure manufacturer serving beverage, food and selected healthcare customers through direct key accounts. Arden announced a EUR 24m annual procurement and cross-selling plan targeted by year three. The supplied materials do not disclose the number of bidders or establish how the announced plan affected the purchase price. *Relevant transaction consideration:* No seller-specific circumstance is identified in the supplied materials.

# Transaction observations | continued

Separate supplied facts from conclusions that are not established by the evidence.

---

## PT-08 | Kardia Systems / MediCore Devices | 2025-08-25

MediCore is a medical-device components supplier with proprietary device intellectual property. The transaction announcement emphasizes that proprietary IP. Comparable LTM EBITDA is unavailable, and no quantified synergy amount is supplied. *Relevant transaction consideration:* The different product scope and the absence of comparable LTM EBITDA limit the usefulness of the transaction for TargetCo.

## PT-03 | Ferrovial Holdings / Veralux Pack | 2022-11-07

Veralux is a specialty rigid-packaging and closures business serving European food and personal-care customers. At the time of the transaction, the company was emerging from a capacity-expansion ramp during a period of industry demand normalization. No synergy information is supplied. *Relevant transaction consideration:* The transaction is older, but its capacity-expansion and demand-normalization context is relevant when assessing comparability with TargetCo.

## PT-06 | Atlas Group / FlexiSeal Films | 2024-02-02

FlexiSeal manufactures flexible film and pouches for food and household customers. Atlas announced EUR 30m of procurement and footprint synergies. The production model differs from TargetCo's component-manufacturing model. *Relevant transaction consideration:* The different packaging format and production economics limit business comparability; the announced synergy plan should not be treated as evidence of its effect on the purchase price.

## PT-05 | Brixon Group / Northbay Food Tubes | 2021-05-14

Northbay is a regional food-container business with standard formats and limited technical differentiation. The transaction occurred in 2021 after a year of weak food-service demand, and no synergy information is supplied. *Relevant transaction consideration:* The transaction is older and involves a more standardized business with weaker comparability to TargetCo.

## Evidence limitations

- A disclosed synergy plan is a transaction fact. Without additional evidence, do not attribute any part of the observed purchase price or transaction multiple to that plan.
- Recency does not substitute for business comparability, and an older transaction is not necessarily unusable if the business and transaction context remain relevant.
- Missing bidder counts, standalone-cost adjustments, comparable EBITDA or business-mix information may limit the conclusions that can be drawn from a transaction.
- All candidate-company and transaction observations are fictional and instructor-created for this exercise.
